PORTUGUESE MANUFACTURING
SINCE 1981

NEW X75HT

AQUAPURA INVERTER X30HT | X60HT | X75HT

DOMESTIC HOT WATER AND CENTRAL HEATING

ECO-FRIENDLY - GLOBAL WARMING POTENTIAL
R290
GWP-3

AEROTHERMY HEAT PUMP.
LATEST GENERATION OF HEAT PUMP WITHNEW R290 NATURAL REFRIGERANT.

TECHNOLOGY DC INVERTER

TEMPERATURE UP TO 75c

VERY SILENT

HYDRAULIC 100% INSTALLATION

THE LATEST GENERATION OF AIR / WATER HEAT PUMPS

WITH NATURAL REFRIGERANT R290

ENERGIE.PT

AMIGO DO AMBIENTE

Use a natural refrigerant with less global warming potential.

TEMPERATURA ATÉ 75c

The equipment can reach temperatures up to 75°C making it the ideal solution for replacing boilers.

MUITO SILENCIOSO

Generates low levels of noise, almost imperceptible from a few metres away when in operation.

EFICIÊNCIA A+++ ENERGÉTICA

Efficiency class A+++ give the equipment one of the highest levels of efficiency on the market.

FÁCIL INSTALAÇÃO

The system contains no fluorinated gases, it is 100% hydraulic.

SUPER POLIVALENTE

Guaranteed high performance regardless of the use: heating, cooling or production of DHW .

ROBUSTEZ E FIABILIDADE

The equipment has an ABS polymer-coated exterior designed to provide protection against corrosion.

INTUITIVE TOUCH CONTROL

PRODUCTION OF DHW AND HEATING & COOLING

INVERTER X30HT

INVERTER X60HT | X75HT

FUNCTIONING
PRINCIPLE

A refrigerant fluid is pumped to an external heat exchanger (evaporator). At this point, the fluid absorbs energy from the environment thanks to the temperature difference outside. During this process, the fluid changes state and becomes vapor. The gaseous fluid is then drawn in by the mechanical part of the system the compressor. In the compressor, the fluid is compressed, causing an increase in pressure and, consequently, in temperature. Next, the fluid travels to a second internal heat exchanger (condenser), where it transfers the accumulated heat to the home's heating system. As it naturally cools down, the fluid returns to its liquid state. Finally, the pressure of the fluid is reduced through throttling in the expansion valve, and the cycle begins again.

INVERTER HEAT PUMPS
SATAND OUT FOR THEIR HIGH PERFORMANCE

Heat Pumps are prepared for heating and cooling as well as domestic water heating. These solutions stand out for their high energy efficiency, which makes them capable of achieving an energy rating up to A+++ for heating. They also stand out for their ability to integrate with other heating systems and easy installation.

HIGH LEVEL OF EFFICIENCY
DOMESTIC HOT WATER PRODUCTION

The heat from the environment is indirect solar energy, stored in water, air and soil. The Heat Pump will extract heat precisely from these heat sources for later use in your home's climate. Air/Water Heat Pumps with high energy efficiency INVERTER technology are a modern, efficient and clean solution that guarantees the comfort of your home, always respecting the environment.

It's a smart way to use nature's resources to improve your quality of life. By adopting one of these solutions, you will be making a serious commitment to the issue of reducing harmful emissions to our atmosphere, thus contributing to the planet's natural balance. The Air/Water Heat Pumps with INVERTER technology were developed to meet the needs of both domestic and industrial use, for climatization (heating and cooling) and Domestic Hot Water solutions (DHW).

CONSUMPTIO OF PRIMARY ENERGY

Compared to the diesel boiler, gas boiler or electric heater, the Heat Pump provides quality of life, with low operating costs, due to its high efficiency.

DC INVERTER TECHNOLOGY

DC INVERTER technology is different from any other technology existing on the market because it has a compressor with the capacity to vary the operating frequency, meeting the exact needs of climatization comfort at home. This achieves greater savings in energy consumption.

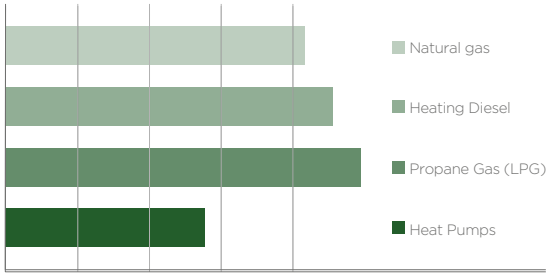

CHART OF ENERGY CONSUMPTION

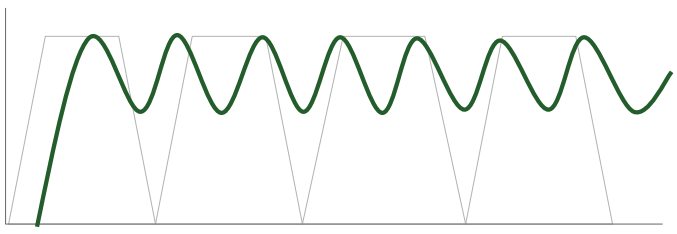
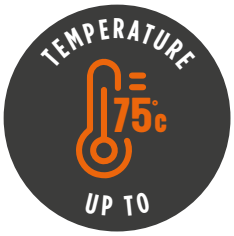


INVERTER vs TRADITIONAL Operation Period

AQUAPURA INVERTER X30HT | X60HT | 75HT

DOMESTIC HOT WATER AND CENTRAL HEATING

MAXIMUM RETURN ON INVESTMENT



KEY FEATURES

- Compact design
- Touch control
- Simple installation “Plug & Use”
- Control via Smart APP
- RS485/ModBus centralized control
- Configuring operating periods
- Low operating noise
- Operation at outdoor temperatures down to -25°C

AQUAPURA X30HT

- DHW production up to 75°C
- Integrated water pump
- Up to 120 kw of capacity connecting 4 units of 30 kw/each

AQUAPURA X60HT

- Production DHW up to 70°C
- Up to 240 kw of capacity connecting 4 units of 60 kw/each

AQUAPURA X75HT

- Production DHW up to 70°C
- Up to 300kW of capcity connecting 4 units of 75kW/each
