OPERATING PRINCIPLE

The refrigerant fluid is pumped into an external heat exchanger (evaporator). Here, with the help of a fan, it absorbs energy from the surrounding air due to the temperature differential achieved outside, resulting in a phase change to the gaseous state.

It is then drawn into the mechanical part of the system, the compressor. At this stage, the fluid is compressed, pressure increases, and consequently its temperature rises. The fluid then flows to a second internal heat exchanger (condenser), where it transfers heat to the water stored in the tank.

As the temperature decreases, the fluid changes back to its liquid state. Its pressure is reduced by a throttling effect in the expansion valve, and the cycle starts again.

PORTUGUESE MANUFACTURING

- 1 Cylinder
- 2 Condenser
- 3 Electric heating element + Sensor
- 4 Magnesium Anode (if applicable)
- 5 Split Cover
- 6 Ventilator
- 7 Flare connection - easy installation (1/4" | 3/8")
- 8 Outdoor unit casing in polymer material (ABS)

MORE COMPLETE & INTUITIVE

The AQUAPURA SPLIT GREEN heat pump controller is a user-friendly and intuitive interface that allows:

- HYBRID | ECO | BOOST | SMART GRID | SOLAR modes
- Temperature setpoint adjustment for the heat pump
- Temperature setpoint adjustment for the backup heating element
- Integrated Wi-Fi for remote management
- Schedule programming and consumption statistics
- Parameter and temperature configuration

HEAT PUMPS FOR DOMESTIC HOT WATER

We select the best components and subject our systems to the most rigorous quality tests to ensure maximum customer satisfaction.

Models 160L, 200L, and 300L can be recessed into a 60x60cm cabinet.

The AQUAPURA SPLIT GREEN heat pump is a modern, efficient, and ecofriendly solution for producing domestic hot water, ideal for both residential use and high-demand applications such as hotels, hospitals, or gyms.

With direct condensation technology, it consists of an outdoor unit and an internal storage tank, connected by piping up to 30 meters in total length, with a maximum height difference of 20 meters between units.

The AQUAPURA SPLIT GREEN heat pump operates at outdoor temperatures down to -15°C and allows the production of domestic hot water up to 65°C using only the compressor, enabling the direct replacement of conventional systems such as water heaters or electric cylinders.

- Wall-mounted and floor-standing heat pumps, with capacities from 160 to 500L
- Stainless steel tank (AISI 444 or Duplex 2205), with external condenser
- Domestic hot water production up to 65°C using only the compressor

- Rapid heating: DHW in less than 3 hours, up to 75% energy savings
- Quiet operation, no ducting required
- Flexible installation: up to 30 m distance and 20 m height difference
- Models can be recessed into a standard 60x60 cm cabinet

DISCOVER OUR APP ILETCOMFORT

AENERGIE presents the latest technological innovation integrated into its products: the iLetCom-fort app. With iLetComfort, customers can remotely manage their water heating equipment.

DISTANCE BETWEEN UNITS

The total piping length (**L1** + **L2** + **L3**) can be up to 30 meters. The maximum height difference between the outdoor unit and the water tank (**L2**) is 20 meters.

For lengths exceeding 10 meters, additional refrigerant must be added at a rate of 20 g/m for each meter above 10 m. For example, for an installation with 30 m of piping (liquid line length), the required additional refrigerant is:
 $20 \times (30 - 10) = 400 \text{ g.}$

CYLINDER		SPLIT 160i (MURAL)
Capacity	L	160
Dimensions (ø height)	mm	530/1141
